DxWnd and Warlords 3 DLR
Posted by Vissavald - 01 May 2017 13:11

_____

I stumbled across this little program a couple of days ago. Did anyone experiment with it?

Honestly, I personally find virtual machines cumbersome and not very handy, so I'll try DxWnd instead (recently I gave up finally and installed Win7 on my old-school gaming desktop PC, mainly because the external 2Tb harddrive I got for storing games distributives doesn't work with WinXP).

sourceforge.net/projects/dxwnd/

Well, seems it works perfectly so far (with -wincursor though, but there are so many settings in DxWnd, so I'll try to experiment with them to get the full-colored cursors maybe). And it may work fullscreen despite the screenshot.

I had not much time to give it a full walkthrough, so I'll keep the community informed about my trials.

_____

So, the mighty Italian sorcerer Ghotik (creator of DxWnd) has condescended to our prayers and manifested his power:
