Creating new armies - problem with .pcx
Posted by Magog - 09 Mar 2012 19:34

_____

Hello

So I recently started playing W3 again and found the excellent modding tools you have here (big thanks to their creators). I played a bit with modifying units, but when I wanted to create new ones I found a problem with .pcx files, namely that I can't add transparency. So this is a question for people who created custom armies for W3: how do you add transparency? Using GIMP I tried copying this pink colour standard units have around them, but it shows up as dark red in-game. Is it possible to add a transparent layer somehow? Work on other format and save as .pcx? Some editor? So far everything I tried either shows as solid background or the game says it can't load image.pcx.

Magog,

This article from Civ3 might be of some help. I say might be because I don't know GIMP but the question seems related (trying to add transparency to PCX units in CV3 using GIMP).

Hmmm that doesn't seem to work, which is strange because I'm now 100% sure I'm using the exact same colourmap original images do. Even if I work on the base of original images it's like the game knows where in the image is the "original" transparent colour and where copied/painted by me. Maybe I'll try a different image editor.

It is probably related to the color palette. I myself use photoshop and to create new units I simply open an existing one, use the magic wand tool and reverse selection to mark the unit in each cell, then I change the color of the image using the slider accessible via the menu image -> modify - change color. It is much faster and easier than making things from scratch.

All right I got it. I converted to indexed image using different palettes/options until it worked. The colours are still not exactly how I would like them to be, but I have transparent background, so it's just a matter of editing the palette/colormap I think.

Thanks for help, if I actually finish something I'll post it.

I have encountered the same problem with Gimp.

Currently I use a hex editor to fix palette after saving an image. Going to create a program to automate this.
