Warlords,

Molotov has completely rewritten his old editor and produced the finest DLR editor to date.

I've posted it in the downloads section as Molotov's Ultimate Editor.

I would suggest that anyone looking edit armies, heroes or spells use this editor for all their future work. The only requirement is to have .NET 3.5 runtime installed on your machine (which most people probably have).

Many thanks to Molotov for this contribution to the community.
